

The Power of Data

Understanding and having access to the right data at the right time is a powerful driving force to move your business forward. We build solutions to help organizations gain meaningful and actionable insights through their existing data assets and stay ahead of the curve.

The Streamline Approach

At Streamline, we don't do cookie-cutter solutions. We care about your business and your long-term success. We take the time to understand your needs and challenges to deliver best-fit solutions and achieve operational excellence.

Our operational data specialists provide best in class delivery in an agile and cost-effective way to build solutions that allow organizations to access and visualize real-time data. This allows businesses to leverage their data assets and make important decisions in a meaningful way.

Whether you already have a PI system in place and want to maximize its value or are looking to implement a new system, we have the expertise you need to improve or implement your OSIsoft PI Systems.

What We Do

Consulting & Design

We work with you to understand your challenges, provide guidance and advice to find the best solution so you get the most out of your data and technology investments. Whether you have a PI solution in place or looking to expand or grow your current solutions, we have the right people and expertise for you.

Implementation & Integration

We work with you to design and deliver the best architecture to meet your needs. With a focus on minimizing cost; while delivering the most capability, your business goals are our priority. Our team of experts can help integrate your various projects or ecosystems into your PI environment.

Visualization

We believe that data can be both functional and beautiful. Our engineers, subject matter experts, and graphic designers build PI displays and dashboards with your business and the users first and foremost.

Data Acquisition & Contextualization

Streamline has expertise in house that understand the end to end picture of the PI ecosystem. We are here to assist you in building robust data acquisition systems and help you organize, structure and manage your operational data.

System Support

Our support services are here to further maximize your investments, including optimization and tuning, migration, upgrades, and administration; and provide general support for any technical issues that may occur.
